Subject: Comments to Urban Water Use Technical Methodologies Draft due 8.12.2010

What system are you requiring to reference the data used in the calculations.

Is there going to be a centered reference library, or in a regional reporting situation, does the County take a lead agency role.

We would like to be able to trace the accuracy of the calculations to tie into other state requirements of the General Plan and its Elements and Infrastructure needs.

We have found that Tables presented for Total Water Used from all sources do not even add up to the Grant Totals given in the Water Supply Assessment Reports required (Los Angeles Department of Water and Power).

Groundwater extraction is a problem in un-adjudicated basins with no meters and no reports. Those Groundwater Basins have no representation at the table, yet the discharge may play in future recycled water calculations (and exemptions).

We are concerned, that to grow an economy, industrial and commercial use would have to be approached with industries that are new such as renewable energy production and oil fracking for the oil industry. High use in the CII area may play in future recycled water calculations and should not be exempted if there might be a burden in the other sectors.
